for
Community Service Project

Name of the Student: VASAMSETTI SATYASAHITHI

Name of the College: Bonam Venkata Chalamayya Engineering College **Registration Number:** 22221A05C2

Period of CSP: **From:** **To:**

Name & Address of the Community/Habitation: Sanapallilanka, AinavIlli mandal,
East Godavari District, Andhra Pradesh,
PinCode:533211

Instructions to Students for Community Service Project

Please read the detailed Guidelines on Community Service Project hosted on the website of AP State Council of Higher Education https://apsche.ap.gov.in

Link:
https://apsche.ap.gov.in/Pdf/Guidelines%20for%20the%20OJT%20Internship%20Community%20Service%20Project.pdf

1. It is mandatory for all the students to complete 2 months (180 hours) of Community Service Project as a part of the 10 month mandatory internship/on the job training.
2. Consider yourself as a committed volunteer in the community, you work with.
3. Every student should identify the village/community/habitation for Community Service Project (CSP) in consultation with the College Principal/the authorized person nominated by the Principal.
4. Report to the community/habitation as per the schedule given by the College. You must make your own arrangements of transportation to reach the community/habitation.
5. You will be assigned with a Faculty Guide from your College. He/She will be creating a WhatsApp group with your fellow volunteers. Post your daily activity done and/or any difficulty you encounter during the programme.
6. You should maintain punctuality in attending the CSP. Daily attendance is compulsory.
7. You are expected to learn about the community/habitation and their problems.
8. Know the leaders and the officials of the community/habitation.
9. While in project, always wear your College Identity Card.
10. If your College has a prescribed dress as uniform, wear the uniform daily.
11. Identify at least five learning objectives in consultation with your Faculty Guide. These learning objectives can address:
    - Information about the community, including the realities and problems of the society.
    - Need for creating awareness on socially relevant aspects/programs.
    - Acquiring specific Life Skills.
    - Learning areas of application of knowledge and technologies related to your discipline.
    - Identifying developmental needs of the community/habitation.

12. Practice professional communication skills with team members, and with the leaders and officials of the community. This includes expressing thoughts and ideas effectively through oral, written, and non-verbal communication, and utilizing listening skills.
13. **Be regular in filling up your Program Book. It shall be filled up in your own handwriting. Add additional sheets wherever necessary.**
14. At the end of Community Service Project, you shall be evaluated by the person in-charge of the community/habitation to whom you report to.
15. There shall also be evaluation at the end of the community service by the Faculty Guide and the Principal.
16. Do not indulge in any political activities.
17. Ensure that you do not cause any disturbance to the inhabitants or households during your interaction or collection of data.
18. Be cordial but not too intimate with the persons you come across during your service activities.
19. You should understand that during this activity, you are the ambassador of your College, and your behavior during the community service programme is of utmost importance.
20. If you are involved in any discipline related issues, you will be withdrawn from the programme immediately and disciplinary action shall be initiated.
21. Do not forget to keep up your family pride and prestige of your College.
22. Remember that you are rendering valuable service to the society and your role in the community development will become part of the history of the community.

Community Service Project Report

Submitted in accordance with the requirement for the degree of…….

Name of the College: Bonam Venkata Chalamayya Engineering College

Department: Computer Science And Engineering

Name of the Faculty Guide: Mrs. G. Santhoshi Lakshmi M.tech

Duration of the CSP: From To

This is to certify that ..... (Name of the Community Service Volunteer) Reg. No..... of ..... Name of the College) underwent community service in ..... (Name of the Community) from..... to .....

The overall performance of the Community Service Volunteer during his/her community service is found to be ..... (Satisfactory/Good).

Authorized Signatory with Date and Seal

ACKNOWLEDGEMENT

We express our sincere gratitude to our esteemed institution, BVC Engineering College (A), Odalarevu, for providing us with the opportunity to fulfill our academic goals.

We convey our special thanks to **Mrs.G.Santhoshi Lakshmi** M. Tech, who has been our project guide. We sincerely thank him for his constant support and guidance, without which this work would not have been successfully completed.

We convey our special thanks to our Head of the Department**, Dr. Meerasharif Sheik** M. Tech, Ph. D of the CSE Department, and the teaching and non-teaching faculty members for providing all the necessary facilities to carry out this work.

We would also like to thank our Principal of BVC Engineering College (A), Odalarevu**, Dr. Maheswar Dutta**, Ph.D., M. Tech., MSAE, MCI, MISTE, for providing excellent facilities and motivation to carry out this work.

ABSTRACT

Aquaculture is an important activity that supports food production and provides income to rural communities. This project focuses on aquaculture practices in Sanapallilanka village, Ainavilli Mandal, Andhra Pradesh, where many families are involved in fish and prawn farming.

The main objective of this project is to study the existing aquaculture methods and create awareness about better practices. As part of the project, surveys and interactions were conducted with local farmers to understand pond preparation, fish feeding, water management, and common issues such as water pollution and fish diseases.

Based on the observations, simple suggestions were provided, including maintaining proper water quality, using suitable feed, regular pond cleaning, and basic disease prevention methods. Awareness was also created among villagers about improving aquaculture techniques to increase productivity and income.

Through this project, we gained practical knowledge about aquaculture and its importance in village development. It also encouraged farmers to adopt better and sustainable practices.

CHAPTER 1: EXECUTIVE SUMMARY

1.1 Description of Community:

Sanapallilanka is a village located in Ainavilli Mandal in Dr. B.R. Ambedkar Konaseema District of Andhra Pradesh (Pincode: 533211). The village has approximately 1000–1500 families with an estimated population of around 4,500–5,500 people.Agriculture is the main occupation, with crops like paddy, coconut, and banana. In addition, fish and prawn farming (aquaculture) is also an important source of income for many families. The village is part of the fertile Konaseema region, known for its rich soil and water resources.

1.2 Summary of activities done:

- Identified the village suitable for the project
- Conducted surveys among villagers and farmers about aquaculture practices
- Collected information regarding pond conditions, water quality, and feeding methods
- Identified problems affecting fish and prawn farming
- Provided awareness about proper pond management and fish care techniques
- Conducted interactions to encourage better aquaculture practices

---

1.3 Learning Objectives:

- To understand the importance of aquaculture
- To identify common problems in fish and prawn farming
- To learn basic methods for maintaining ponds and fish health
- To create awareness about sustainable aquaculture practices

---

1.4 Project Outcomes:

- Increased awareness about aquaculture practices
- Improved understanding of fish and pond management
- Encouraged farmers to adopt better farming methods
- Developed problem-solving and communication skills

CHAPTER 2: OVERVIEW OF THE COMMUNITY

2.1 Historical profile of the community/habitation:

Sanapallilanka is a small village located in Ainavilli Mandal in Dr. B.R. Ambedkar Konaseema District of Andhra Pradesh with total 1300+ families residing. The Rameswaram village has a population of 5,218 of which 2,590 are males while 2,628 are females as per Population Census 2011.

In Sanapallilanka village, population of children with age 0–6 is around 450, which makes up approximately 8.6% of the total population of the village. The Average Sex Ratio of Sanapallilanka village is around 1015, which is higher than Andhra Pradesh state average of 993. The Child Sex Ratio is also close to the state average.

Sanapallilanka village has a good literacy rate compared to many rural areas of Andhra Pradesh. The literacy rate is around 70%, with male literacy higher than female literacy, but both showing gradual improvement.

The village is located in the Konaseema region, which is well known for aquaculture and agriculture activities. Fish and prawn farming are important sources of income for many families in the village.

As per the Constitution of India and Panchayati Raj Act, Rameswaram village is administered by a Sarpanch (Head of Village) who is elected as the representative of the village.

2.2 Community Diversity:

Sanapallilanka village shows a rich diversity in terms of social, cultural, and occupational groups. The people living in Rameswaram belong to different caste groups, religious communities, and economic backgrounds, yet they live together peacefully and maintain mutual cooperation in daily life. Aquaculture is the primary occupation of most families, while some people are engaged in agriculture, small businesses, and daily wage activities. The village reflects a blend of traditional values and modern influences, where elders follow customs and traditions, while younger generations are becoming more aware of education and improved farming techniques..

Despite the diversity, the villagers share common challenges related to aquaculture, such as water quality issues, disease outbreaks in fish and prawns, high feed costs, and lack of technical knowledge. Many farmers face difficulties in maintaining healthy pond conditions due to changing weather and improper management practices. However, the strong sense of unity and cooperation among villagers helps them share knowledge, support each other in farming activities, and adopt better aquaculture methods for improving productivity and income.

2.3 Brief notes on Socio-Economic conditions of the Community:

Most people in Sanapallilanka depend on aquaculture as their primary source of income and livelihood. Farmers are mainly involved in fish and prawn farming, depending on water availability and pond conditions. Some households also practice small-scale agriculture and related activities for additional income.

However, some villagers face financial problems due to issues in aquaculture such as disease outbreaks in fish and prawns, poor water quality, high feed costs, and changing weather conditions. In some cases, improper pond management and overuse of chemicals also affect fish health and reduce production, leading to losses for farmers.

Awareness about modern aquaculture practices is still limited in certain areas of the village. Many farmers are not fully aware of scientific fish farming methods, proper pond preparation, water quality management, and the use of safe and effective disease control measures. Due to these challenges, fish and prawn growth is affected, resulting in lower production and reduced income for farmers.

Providing proper knowledge about aquaculture, including selection of quality fish seed, pond preparation, regular monitoring of water quality, proper feeding practices, and timely disease management, can greatly improve production. Awareness programs and training on improved aquaculture techniques can help villagers manage their ponds more effectively, increase yield, and improve their income.

CHAPTER 3: COMMUNITY SERVICE PART

3.1 Conducting the survey: By conducting the survey, I gathered information from the farmers and villagers related to aquaculture practices. The survey included identifying the types of fish and prawns cultivated, pond conditions, feeding methods, water quality, and common problems faced during farming.

3.2 Analyzing the problems and finding out the solutions: After conducting the survey, I identified the major problems related to aquaculture faced by the farmers and villagers. Some of the common problems included poor water quality, disease outbreaks in fish and prawns, high feed costs, improper pond management, and limited awareness about modern aquaculture methods.

3.3 Conducting campaign: With all the possible solutions, I conducted an awareness campaign by visiting aquaculture ponds and interacting with farmers and villagers. During the campaign, I explained different methods of proper pond management, maintaining water quality, correct feeding practices, and basic disease prevention techniques. I also explained the benefits of following improved aquaculture practices to increase production and income.

3.4 Interacting with the Sarpanch: I interacted with the village Sarpanch and discussed all the aquaculture-related problems observed during the survey phase. I explained the importance of promoting better aquaculture practices in the village. I also requested the Sarpanch to support awareness programs, provide guidance to farmers, and encourage the use of improved farming methods to increase productivity.

This project also improved my social responsibility and citizenship skills by encouraging me to contribute to the welfare of the community. It increased my involvement in community service activities and helped in building connections with farmers and community members for learning and future opportunities. It also enhanced my interpersonal development, especially the ability to work with others, build leadership qualities, and improve communication skills while interacting with villagers and explaining aquaculture practices.

CHAPTER 4: ACTIVITY LOGS

4.1 ACTIVITY LOG FOR THE FIRST WEEK

Day & Date	Brief description of the daily activity	Learning Outcome	Person In-Charge Signature
Day – 1	Met the village Sarpanch of Rameswaram and explained the aquaculture project. Collected basic information about fish and prawn farming..	Understood village background and received support for the project.	
Day – 2	Collected general information about the village from local sources and villagers, including aquaculture practices and pond availability	Gained basic understanding of aquaculture activities in the village.	
Day – 3	Interacted with farmers about fish types, feeding methods, and problems faced..	Identified common issues like diseases and water quality problems.	
Day – 4	Visited ponds and observed farming methods and pond conditions.	Learned about pond maintenance.	
Day – 5	Discussed feeding and monitoring practices with farmers.	Understood importance of regular monitoring.	
Day – 6	Discussed simple solutions like water quality management and proper feeding.	Learned basic improvement methods.	

WEEKLY REPORT

WEEK – 1 (From Dt to)

Objective of the Activity Done:

To collect information from the farmers and villagers of Rameswaram regarding aquaculture practices and the problems faced in fish and prawn farming.

Detailed Report:

On the first day, I interacted with the village Sarpanch of Sanapallilanka to take permission for conducting my project on aquaculture activities. After receiving permission, I collected basic information from the Gram Sachivalayam staff about the number of ponds, aquaculture areas, and types of fish and prawns cultivated in the village.

During this week, I interacted with nearly 25–30 farmers and villagers of Rameswaram, where I collected valuable information about their aquaculture activities. I gathered details about the types of fish and prawns they cultivate, feeding methods, pond maintenance, and water management practices. I also discussed with them the methods they use to maintain water quality and protect fish from diseases.

Throughout this week, I observed several problems faced by the farmers related to aquaculture. Some of the common problems noticed were poor water quality, disease outbreaks in fish and prawns, high feed costs, and lack of awareness about modern aquaculture methods. I also observed that some farmers were using improper chemicals, which affected fish health and reduced production.

Overall, this week's activities helped me understand the real-life challenges faced by farmers in aquaculture and the importance of proper pond management, water quality control, and disease prevention methods. It also helped me gain knowledge about sustainable aquaculture practices for improving production and income in Rameswaram village.

4.2 ACTIVITY LOG FOR THE SECOND WEEK

Day & Date	Brief description of the daily activity	Learning Outcome	Person In-Charge Signature
Day – 1	Interacted with a few farmers near aquaculture ponds and discussed their farming methods and problems.	Identified issues like water quality and financial constraints.	
Day – 2	Interacted with farmers about fish and prawn farming practices and feeding methods.	Understood problems like diseases and high feed costs.	
Day – 3	Visited aquaculture ponds and observed water conditions and management practices.	Learned importance of proper water and pond management.	
Day – 4	Interacted with farmers and collected information about pond maintenance and harvesting.	Understood issues like water shortage and fish diseases.	
Day – 5	Discussed with farmers about production levels and financial challenges.	Identified lack of proper support and management practices.	
Day – 6	Interacted with farmers about problems caused by weather changes and pond conditions.	Learned impact of climate and water conditions on aquaculture.	

WEEKLY REPORT

WEEK – 2 (From Dt to Dt)

Objective of the Activity Done:

To understand more about aquaculture practices and identify the problems faced by farmers in maintaining healthy fish and prawn farming.

Detailed Report:

In this week, I collected detailed information about aquaculture activities in Sanapallilanka village and the amount of money farmers invest in fish and prawn farming. I also identified the problems they face in maintaining ponds, water quality, and fish health. During this week, I interacted with fewer farmers, but I noticed several important issues related to aquaculture.

I interacted with 7–8 farmers who are involved in fish and prawn farming. These farmers explained that production depends on water quality, feed, and proper pond management. In one acre of pond, farmers can get good yield depending on feeding methods and maintenance. They also explained that fish growth depends on water condition and regular monitoring.

I also collected information from another farmer who manages around 2 acres of aquaculture ponds. He invests a significant amount for fish seed, feed, and maintenance. Normally, fish and prawns take a few months to grow and give yield under proper conditions. However, due to diseases, water pollution, and market price fluctuations, farmers face difficulties in maintaining production and earning good income.

During this week, I understood that lack of proper knowledge about water quality management, disease control, and feeding practices are affecting aquaculture. This helped me understand the importance of proper pond maintenance, regular monitoring, and improved farming techniques to increase production and income.

4.3 ACTIVITY LOG FOR THE THIRD WEEK

Day & Date	Brief description of the daily activity	Learning Outcome	Person In-Charge Signature
Day – 1	Approached project in-charge for guidance on conducting awareness activities related to aquaculture.	Gained basic guidance for conducting awareness programs.	
Day – 2	Interacted with local staff and gathered information about conducting awareness campaigns.	Learned how to interact with farmers and share knowledge.	
Day – 3	Discussed common problems in aquaculture with teammates.	Identified issues like diseases, water quality, and pond management.	
Day – 4	Collected information from online sources about aquaculture practices and solutions.	Learned basic solutions like water management and feeding methods.	
Day – 5	Discussed possible solutions to improve fish and prawn farming.	Understood importance of proper pond management and monitoring.	
Day – 6	Interacted with farmers and discussed daily challenges in aquaculture.	Learned about practical problems faced by farmers.	

WEEKLY REPORT

WEEK – 3 (From Dt to Dt)

Objective of the Activity Done:

To understand aquaculture problems in detail and learn about possible solutions and awareness methods.

Detailed Report:

During this week, I approached my faculty guide and Sachivalayam staff of Sanapallilanka village to understand the proper procedure for conducting awareness campaigns related to aquaculture. They provided useful guidance on how to interact with farmers directly at aquaculture ponds and explain better farming practices effectively.

After that, my teammates and I gathered together and reviewed all the major problems identified during the survey phase. We noticed that many farmers were not maintaining proper water levels in ponds, which affected fish growth. Poor water quality and lack of proper drainage also created unhealthy conditions for fish and prawns. We suggested that proper water management and regular monitoring should be followed to maintain healthy pond conditions.

We also observed that diseases in fish and prawns vary depending on water conditions and seasons, and many farmers do not have sufficient knowledge about identifying and controlling them at the right time. To address this issue, we introduced simple methods such as regular water testing, maintaining cleanliness in ponds, and using proper feed and safe medicines when required.

Overall, this week helped us understand the importance of proper pond management, disease identification, and the use of improved techniques in aquaculture. The solutions identified during this phase helped farmers improve their knowledge and maintain better production in Rameswaram village.

4.4 ACTIVITY LOG FOR THE FOURTH WEEK

Day & Date	Brief description of the daily activity	Learning Outcome	Person In-Charge Signature
Day – 1	Interacted with farmers and discussed problems in aquaculture and market conditions.	Understood challenges in production and income.	
Day – 2	Visited farmers and explained basic pond management and fish care methods.	Farmers showed interest in improved practices.	
Day – 3	Visited local shops and collected information about fish feed and aquaculture materials.	Learned about costs and materials used in farming.	
Day – 4	Interacted with farmers about feeding practices and pond maintenance.	Understood importance of proper feeding and water quality.	
Day – 5	Explained simple solutions like regular monitoring and maintaining clean ponds.	Improved awareness about better aquaculture practices.	
Day – 6	Introduced basic methods for identifying fish diseases and maintaining pond health.	Learned how simple techniques help improve production.	

WEEKLY REPORT

WEEK – 4 (From Dt to Dt)

Objective of the Activity Done:

To conduct an awareness campaign by providing solutions related to aquaculture and improving fish and prawn farming practices.

Detailed Report:

To conduct the campaign in Sanapallilanka village, we gathered several farmers near the Sachivalayam and interacted with them about aquaculture practices. We clearly explained our suggested solutions and described the benefits of using these methods in their daily farming activities.

One of the solutions suggested was maintaining proper water quality in ponds during the early stages of fish and prawn growth. Regular monitoring of water and maintaining cleanliness helps improve fish health and increase production. Another important solution was to avoid poor water conditions by ensuring proper drainage and maintaining suitable water levels in ponds.

Since many farmers were not fully aware of fish and prawn diseases and their control methods, we explained simple ways to identify diseases and suggested using proper feed and safe medicines when required. We also emphasized the importance of regular pond monitoring and cleanliness.

We also interacted with the village Sarpanch of Rameswaram and explained the problems faced by farmers related to aquaculture costs, feed expenses, and maintenance. We requested the Sarpanch to support farmers by providing better facilities and spreading awareness about improved aquaculture practices.

Overall, this campaign helped farmers understand the importance of proper pond management, disease control, and water quality maintenance. It also increased awareness about better techniques that can improve production and income in Rameswaram village.

4.5ACTIVITY LOG FOR THE FIFTH WEEK

Day & Date	Brief description of the daily activity	Learning Outcome	Person In-Charge Signature
Day – 1	Interacted with farmers and discussed pond preparation and its importance.	Understood role of proper pond setup in fish growth.	
Day – 2	Visited aquaculture ponds and explained water management practices.	Learned importance of maintaining water quality.	
Day – 3	Discussed with farmers about feeding practices and fish growth.	Understood importance of proper feeding methods.	
Day – 4	Explained use of suitable fish feed and its impact on production.	Learned role of feed in improving yield.	
Day – 5	Observed ponds and discussed importance of aquaculture in livelihood and environment.	Understood role of aquaculture in income and sustainability.	
Day – 6	Conducted awareness discussion about fish health, disease prevention, and pond care.	Learned importance of maintaining healthy aquaculture practices.	

WEEKLY REPORT

WEEK – 5 (From Dt to Dt)

Objective of the Activity Done:

To create awareness among farmers about the importance of aquaculture, proper fish and prawn farming practices, and maintaining pond conditions to improve production and income.

Detailed Report:

During the fifth week of the campaign in Sanapallilanka village, we continued interacting with farmers to spread awareness about the importance of aquaculture and its role in livelihood. We gathered farmers near aquaculture ponds and discussed how fish and prawn farming helps in providing income and supports the local economy.

One of the main topics explained during this week was the importance of maintaining healthy pond conditions for better production. Farmers were informed that proper aquaculture depends on good water quality, suitable feed, and regular monitoring. Healthy pond conditions help improve fish growth and increase yield.

We also discussed the importance of maintaining proper water levels and cleanliness in ponds. Farmers were advised to regularly check water quality and avoid overfeeding, as it can affect fish health. Proper water management helps in maintaining a healthy environment for fish and prawns.

Another important topic discussed was the role of feeding and monitoring in aquaculture. Farmers were advised to provide the right quantity of feed at the correct time to ensure proper growth. Regular monitoring helps in identifying problems early and taking necessary action.

In addition, we explained the importance of protecting fish and prawns from diseases and environmental changes. Farmers were encouraged to maintain cleanliness, use proper feed, and take preventive measures to avoid losses. Healthy aquaculture practices lead to better production and improved income.

4.6 ACTIVITY LOG FOR THE SIXTH WEEK

Day & Date	Brief description of the daily activity	Learning Outcome	Person In-Charge Signature
Day – 1	Interacted with farmers and discussed importance of aquaculture in livelihood.	Understood role of aquaculture in income and development.	
Day – 2	Visited ponds and observed different stages of fish growth.	Learned about growth stages of fish and prawns.	
Day – 3	Discussed importance of water quality and regular monitoring.	Understood role of water in fish growth.	
Day – 4	Explained importance of proper feeding and timing.	Learned how feeding affects growth.	
Day – 5	Interacted with farmers about nutrients and feed quality.	Understood importance of quality feed.	
Day – 6	Conducted awareness discussion about maintaining healthy ponds.	Learned importance of regular pond care.	

WEEKLY REPORT

WEEK – 6 (From Dt to Dt)

Objective of the Activity Done:

To create awareness among farmers about the importance of aquaculture and to explain the basic requirements needed for healthy fish and prawn growth and improved productivity.

Detailed Report:

During the sixth week of the campaign in Sanapallilanka village, we continued interacting with farmers to spread awareness about the importance of aquaculture and its role in supporting livelihoods. Farmers were gathered near aquaculture ponds, and discussions were conducted on how fish and prawn farming contribute to income and food supply.

One of the main topics discussed during this week was the importance of aquaculture in daily life. Farmers were informed that aquaculture provides food, employment, and supports the local economy. It also plays an important role in rural development.

We also discussed the different stages of fish and prawn growth and how proper care at each stage supports healthy development. Farmers were encouraged to regularly monitor pond conditions and ensure proper feeding and maintenance.

Another important topic explained was the role of water quality in aquaculture. Farmers were advised to maintain clean water and proper water levels to support fish health and growth. Good water conditions help in better production and reduce the chances of disease.

In addition, we explained the importance of proper feeding and pond conditions for healthy growth. Quality feed provides necessary nutrients, while well-maintained ponds support continuous production. Farmers were encouraged to follow regular monitoring practices.

Overall, the activities conducted during this week helped farmers understand the importance of aquaculture and the factors required for healthy fish and prawn growth. The awareness created during this campaign encouraged farmers to adopt better practices for improving productivity and income in Rameswaram village..

CHAPTER 5: OUTCOMES DESCRIPTION

Details of the Socio-Economic Survey of the Village/Habitation Attach the questionnaire prepared for the survey.

The topic for the Socio-Economic Survey that I have chosen is **"Aquaculture Activities and its Impact on Farmers and Livelihood in Sanapallilanka Village."** To proceed with the survey, I first visited the village officials of Rameswaram and obtained their permission to interact with the farmers and villagers. After receiving permission, I visited aquaculture ponds and interacted directly with farmers to understand the problems they face in fish and prawn farming.

During the survey, I interacted with several farmers in the village to collect information about the types of fish and prawns they cultivate, the methods used for pond management, and the challenges they face in maintaining healthy production. I carefully listened to their responses to identify the most common problems affecting aquaculture. Based on the collected information, I listed out the major problems and prepared suitable solutions to help farmers improve production and income.

The Questions Prepared For The Survey:

- Name of the Farmer
- Father's Name
- Name of the Village
- How many acres of aquaculture ponds do you have?
- Do you own the ponds or are they rented?
- What types of fish or prawns do you cultivate?
- How much income do you get from aquaculture in a year?
- Is your income sufficient to support your family?
- Are you facing any losses in aquaculture?
- Are your fish or prawns affected by diseases?
- Are you facing any water quality or pond management problems?
- What type of feed do you use?
- Are you aware of modern aquaculture practices?
- What changes do you suggest to improve aquaculture?
- Is there any issue related to aquaculture that should be brought to the notice of the government?

After completing two weeks of the survey, I identified that farmers in Sanapallilanka village were facing several problems related to aquaculture. These problems were affecting fish and prawn growth and reducing overall production. Based on the data collected from the farmers, I identified the most common problems faced by them. These problems were listed so that suitable solutions could be suggested to improve aquaculture practices and productivity.

Importance of Aquaculture

1. Source of Food

Aquaculture is an important source of food for humans. Fish and prawns provide high-quality protein, vitamins, and nutrients that are essential for a healthy diet. Many people depend on fish as a regular part of their food, making aquaculture an important activity for food security.

2. Source of Income

Aquaculture is a major source of income for many families in Rameswaram village. Fish and prawn farming provide employment opportunities and support the livelihood of farmers. With proper management, aquaculture can generate good income and improve the economic condition of farmers.

3. Environmental Protection

Aquaculture helps in the effective use of water resources and supports sustainable farming practices. Properly managed ponds can help maintain ecological balance. Aquaculture also reduces pressure on natural water bodies by producing fish in controlled environments

The Problems Identified In The Village:

1. DISEASES IN FISH AND PRAWNS

One of the major problems identified in Rameswaram village is diseases in fish and prawns. Farmers reported that infections affect growth and reduce production. Due to lack of proper knowledge, farmers are unable to identify diseases at early stages, which leads to losses and increased expenses.

2. CLIMATE AND WATER CONDITIONS

Changes in weather such as heavy rains, floods, and high temperatures affect pond conditions. Poor water quality and sudden changes in temperature reduce fish growth and may lead to losses.

3. WATER MANAGEMENT PROBLEMS

Aquaculture depends on proper water quality and maintenance. Some farmers face issues in maintaining water levels and cleanliness in ponds. Poor management affects fish health and reduces yield.

4. HIGH COST AND LOW MARKET RETURNS

Farmers invest a lot in fish seed, feed, and pond maintenance. However, they often do not get proper prices in the market. Delayed payments and middlemen reduce their profits, causing financial problems.

Short-Term and Long-Term Action Plan for Possible Solutions.

After collecting information from the farmers, I identified major problems related to aquaculture. Based on these problems, I suggested some short-term and long-term solutions to improve fish and prawn farming and reduce farmers' losses.

Short-Term Solutions

1. FOR WATER MANAGEMENT

Water quality is very important in aquaculture. Farmers can maintain clean water by regular checking and partial water replacement. Simple filtration and proper drainage can help maintain healthy pond conditions.

2. AWARENESS AND BASIC TRAINING

Many farmers are not fully aware of modern aquaculture practices. Providing basic training on pond management, disease control, and feeding methods can help farmers improve production and reduce losses.

3. PROPER FEEDING METHODS

Using the right type and quantity of feed is important for fish growth. Farmers should avoid overfeeding and follow proper feeding schedules to maintain water quality and improve yield.

4. DISEASE PREVENTION

Farmers should regularly monitor fish health and maintain pond cleanliness. Using safe medicines when required and taking preventive measures can reduce disease outbreaks.

Long-Term Solutions

Long-term solutions are necessary to solve aquaculture problems permanently. I prepared a report explaining the problems faced by farmers in Rameswaram village, such as water quality issues, diseases, high costs, and low market prices.

These issues were discussed with the Village Sarpanch and local officials. I requested them to support farmers by providing better facilities, training programs, and technical guidance.

I also suggested that the Sarpanch forward these issues to higher authorities to provide quality fish seed, affordable feed, and better market support. These steps will help improve aquaculture practices and increase farmers' income.

Community Awareness Program

As the next step in the Community Service Project, I planned to conduct two awareness campaigns in the village to spread knowledge about aquaculture practices, pond management, and fish and prawn care methods.

Before conducting the campaigns, I selected suitable places where a large number of farmers could gather. I also obtained permission from local officials to conduct the awareness programs successfully.

COMMUNITY AWARENESS PROGRAM – 1

The first awareness campaign was conducted near the Sachivalayam in Rameswaram village. Farmers participated actively and listened carefully to the information shared during the program. A flex banner was displayed to show the purpose of the awareness campaign.

During the campaign, I discussed various problems related to aquaculture such as poor water quality, fish and prawn diseases, improper feeding, and high farming costs. After explaining the problems, I also shared simple solutions like maintaining clean water, proper feeding methods, and regular monitoring of ponds.

Farmers showed interest in the solutions and asked questions about fish care and pond management. I answered their questions. Overall, the first awareness campaign was successful, and farmers showed willingness to follow better practices.

COMMUNITY AWARENESS PROGRAM – 2

The second awareness campaign was conducted near aquaculture ponds in village. Farmers actively participated in this program as well. During this campaign, I discussed common aquaculture problems such as water quality issues, disease outbreaks, and effects of weather conditions.

I also explained the benefits of proper pond management, regular water monitoring, and correct feeding practices. Farmers were encouraged to observe ponds regularly and take early action to avoid losses.

The farmers understood the importance of these solutions, and these awareness programs will help in improving aquaculture practices and increasing production in the village.

1.1 Report of the Mini-Project Work Done in the Related Subject w.r.t the Habitation/Village (Aquaculture)

This mini-project was conducted to study aquaculture practices and their impact on farmers in Rameswaram village, Sakhinetipalli Mandal, Dr. B.R. Ambedkar Konaseema District of Andhra Pradesh. The main objective of this project was to understand fish and prawn farming methods, identify problems faced by farmers, and provide simple solutions to improve production and income.

Rameswaram village is well known for aquaculture activities. Many families depend on fish and prawn farming as their main source of livelihood. The village has several aquaculture ponds where farmers practice fish and shrimp cultivation using different methods.

Aquaculture Practices

Aquaculture is the process of cultivating fish and prawns in ponds for food and income. It includes pond preparation, stocking fish seed, feeding, water management, and harvesting.
Healthy aquaculture depends on:

- Good water quality
- Proper feeding
- Regular monitoring
- Disease control

Farmers must take care of ponds regularly to maintain fish health and improve production.

Importance of Aquaculture

Aquaculture plays a very important role in human life and economic development. Since many years, people have depended on fishing and fish farming for food and income. With the increase in population, the demand for fish has also increased, and aquaculture helps in fulfilling this demand. It is one of the most important activities for improving rural development and ensuring income for farmers.

Aquaculture plays an important role in supporting farmers' livelihoods and providing food for people. Fish and prawns are an important source of nutrition and are widely consumed by people. Aquaculture helps in meeting the increasing demand for seafood and supports food security. It also provides employment opportunities to many people in rural areas.

One of the main importance of aquaculture is that it provides food for humans. Fish and prawns are rich in protein, vitamins, and minerals, which are necessary for maintaining good health. Many people depend on fish as a regular part of their diet. Aquaculture helps in producing large quantities of fish to meet the needs of the growing population.

Aquaculture also plays a major role in improving the economy. It provides income to farmers and creates employment in activities such as pond preparation, feeding, harvesting, and transportation. Many small-scale farmers depend on aquaculture for their livelihood. The production and sale of fish and prawns contribute to the economic development of the village and the country.

Another important benefit of aquaculture is the effective use of water resources. Aquaculture uses available water bodies such as ponds and tanks for fish production. With proper management, water can be used efficiently to produce food. This helps in utilizing natural resources in a better way and supports sustainable development.

Aquaculture also supports environmental balance when practiced properly. It reduces pressure on natural water bodies like rivers and seas by producing fish in controlled environments. Proper aquaculture practices help in maintaining water quality and supporting aquatic life.

In addition, aquaculture helps in improving the living standards of farmers. It provides regular income and reduces financial problems. Farmers can improve their lifestyle and support their families through aquaculture activities.

Furthermore, aquaculture supports trade and export. Fish and prawns are exported to different countries, which helps in increasing the income of farmers and contributes to the economy of the nation.

In conclusion, aquaculture is very important for food production, income generation, employment, and economic development. It supports farmers, improves living standards, and helps in meeting the food demand of the growing population. Therefore, it is important to promote aquaculture and adopt better practices for sustainable development.

Impacts on Aquaculture

1. Water Pollution

Aquaculture is greatly affected by water pollution. The use of chemicals, excess feed, and waste materials in ponds can contaminate water. Polluted water reduces oxygen levels and affects fish and prawn health. Poor water quality can lead to diseases and reduce production.

2. Water Usage and Management.

Aquaculture requires proper water management. Excess or poor-quality water affects fish growth. If water is not properly maintained or replaced, it can become harmful. Proper water management techniques help in maintaining healthy pond conditions and improving production.

3. Climate Change

Climate change has a major impact on aquaculture. Rising temperatures, irregular rainfall, floods, and extreme weather conditions affect pond environments. Sudden changes in temperature can harm fish and reduce growth. Climate changes also increase the chances of diseases in fish and prawns.

4. Financial Problems

When aquaculture fails due to diseases, poor water quality, or climate conditions, farmers face financial losses. High investment in feed, seed, and maintenance increases the burden on farmers. If production is low, farmers struggle to recover their costs.

How Has Climate Change Affected Aquaculture and Human Life?

Water Contamination

Water is the most important factor in aquaculture. Due to climate change and improper practices, chemicals and waste materials can contaminate pond water and nearby water sources. Poor water quality affects fish and prawn health and can also impact human health when contaminated water is used.

Water Quality Imbalance

Changes in temperature and weather conditions affect water quality in ponds. When water temperature increases, oxygen levels decrease, which affects fish growth. Poor water conditions lead to stress in fish and reduce production.

Eutrophication

Eutrophication occurs when excess feed and waste materials accumulate in aquaculture ponds. This leads to the rapid growth of algae, which reduces oxygen levels in water. Low oxygen conditions can harm fish and cause losses to farmers.

Excessive Use of Chemicals

In aquaculture, chemicals and medicines are sometimes used to control diseases. However, excessive use of these chemicals can harm fish, pollute water, and affect the environment. Some chemicals remain in water for a long time and may enter the food chain, affecting human health.

Aquaculture is essential for human life as it provides food, income, and employment. Even with increasing industrialization, aquaculture remains an important activity for supporting rural livelihoods and meeting the food demand of the population.

Climate Change Trends Affecting Aquaculture

Changing Rainfall Patterns

Rainfall patterns are changing rapidly due to climate change. Some regions receive heavy rainfall within a short period, while others face long dry periods. These changes directly affect aquaculture ponds. Heavy rainfall can lead to overflow and poor water quality, while lack of rainfall can reduce water availability. Both conditions affect fish and prawn growth and reduce production.

5.5 Survey Conduction

We formed a group of five members and conducted a survey in Rameswaram village regarding aquaculture practices. For this purpose, we prepared a questionnaire to collect information about fish and prawn farming methods, problems faced by farmers, and environmental challenges affecting aquaculture. The survey helped us understand the major issues related to aquaculture and

possible solutions.

Steps Followed to Collect the Information

1. Identification of Aquaculture Areas

To collect the required information related to aquaculture, we first identified the areas where fish and prawn farming activities were taking place. We interacted with the staff of the local Sachivalayam to obtain details about the locations of aquaculture ponds in the village.

2. Interaction with the Farmers Involved in Aquaculture

Our group interacted with farmers who were engaged in fish and prawn farming. During the interaction, we gathered information about the types of fish and prawns they cultivate, methods of farming, and the challenges they face in maintaining healthy production.

3. Filling the Survey Form

By interacting with the farmers, we collected information and recorded it in the survey form. In this form, we gathered details such as the name of the farmer, village name, pond area, income obtained from aquaculture, and the problems faced in fish and prawn farming.

4. Identification of Problems in Aquaculture

Based on the information collected through the survey forms, we identified several major issues affecting aquaculture. These problems were analyzed to understand their impact on fish growth, production, and farmers' income.

Problems Overview

1. Not Getting Proper Price for Fish and Prawns

- This problem is commonly seen among aquaculture farmers.
- On average, farmers invest a large amount per acre for fish seed, feed, medicines, and pond maintenance.
- The selling price of fish and prawns depends on size and market demand.
- Even after good production, farmers often do not get proper price due to middlemen and market fluctuations.
- After deducting all expenses, the remaining profit is often very low.
- Due to this, farmers do not get sufficient income for their hardwork and investment.

2. Natural Disasters Affecting Aquaculture

Diseases in Fish and Prawns

• Fish and prawns are affected by different types of diseases.
• These diseases reduce growth and can cause heavy losses.
• Lack of early identification increases the damage.

Floods and Heavy Rains

• Heavy rains and floods affect pond conditions.
• Excess water disturbs pond balance and reduces water quality.
• This leads to fish loss and reduced production.

3. Lack of Medical Facilities

- In many villages, proper hospital facilities are not available nearby.
- In case of illness or accidents during aquaculture work, farmers must travel long distances.
- Sometimes injuries or infections occur while working in ponds.

Conduction of Campaign:

After completing the survey, we conducted an awareness campaign in the village based on the problems faced in aquaculture. During this campaign, we explained possible solutions to improve fish and prawn farming.

With the help of our project mentor and Sachivalayam staff, we identified suitable solutions to the issues faced by farmers. These solutions focused on improving water quality, reducing diseases, and increasing production.

We created an awareness poster related to aquaculture and displayed it during the campaign. The poster included important information about pond management, feeding practices, and disease control methods.

During the campaign, we discussed the solutions and encouraged farmers to follow better aquaculture practices such as proper feeding, regular monitoring, and maintaining clean water conditions to improve production and income.

Solutions Discussed in the Campaign

1. Water Quality Management

We explained the importance of maintaining clean and healthy water in ponds. Regular monitoring and proper water exchange help improve fish growth and reduce diseases.

2. Proper Feeding Methods

We suggested using correct feed and proper feeding schedules. This helps in improving fish growth and maintaining water quality.

3. Pond Maintenance

Farmers were advised to maintain ponds properly by cleaning and monitoring regularly. Good pond conditions support healthy fish production.

4. Disease Prevention Methods

We suggested regular observation of fish and early treatment to prevent diseases. Maintaining hygiene and using safe medicines helps reduce losses.

CHAPTER 6: RECOMMENDATIONS AND CONCLUSIONS OF THE MINIPROJECT

After completing the awareness campaign, we educated the villagers about improved aquaculture practices. The villagers already had some basic knowledge about fish and prawn farming, but through the campaign they learned better methods to maintain healthy ponds and increase production.

During our visit to the village, we found that farmers faced several issues related to aquaculture. We encouraged them to follow proper pond management practices and avoid the excessive use of harmful chemicals. We also explained the importance of maintaining water quality and using safe methods for disease control.

The villagers showed great interest in participating in the campaign and were eager to gain knowledge about aquaculture. We provided useful suggestions on selecting quality fish seed, maintaining proper feeding methods, and regular monitoring of ponds to improve fish growth.

Many farmers were not aware of how to identify fish and prawn diseases at the early stages. Therefore, we explained simple methods for identifying diseases and suggested proper preventive measures. This helped them understand how to protect fish and improve production.

Most farmers faced water-related problems in maintaining pond conditions. We explained how to maintain proper water levels, ensure water cleanliness, and manage water during different seasons. We also created awareness about regular monitoring and proper pond maintenance.

During the campaign, we also explained how maintaining good pond conditions helps in improving fish growth and reducing losses. Many villagers were unaware of proper aquaculture management practices, so we educated them about simple and effective methods to improve production and income.

Student Self-Evaluation for the Community Service Project

Student Name:

Registration No:

Period of CSP: From: To:

Date of Evaluation:

Name of the Person in-charge:
Address with mobile number:

Please rate your performance in the following areas:

Rating Scale: **1 is lowest and 5 is highest rank**

1) Oral communication	**1**	**2**	**3**	**4**	**5**
2) Written communication	**1**	**2**	**3**	**4**	**5**
3) Proactiveness	**1**	**2**	**3**	**4**	**5**
4) Interaction ability with community	**1**	**2**	**3**	**4**	**5**
5) Positive Attitude	**1**	**2**	**3**	**4**	**5**
6) Self-confidence	**1**	**2**	**3**	**4**	**5**
7) Ability to learn	**1**	**2**	**3**	**4**	**5**
8) Work Plan and organization	**1**	**2**	**3**	**4**	**5**
9) Professionalism	**1**	**2**	**3**	**4**	**5**
10) Creativity	**1**	**2**	**3**	**4**	**5**
11) Quality of work done	**1**	**2**	**3**	**4**	**5**
